Subject: Chino AOC admin record repository index update
Attachments: HanWhite Index.doc; General Index.doc;
STSIU_SiteSpecificCopperCriteria_Folder139_Index.doc;
STSIU_UAA_HydrologyProtocol_Folder137_Index.doc; Hurley Index.doc;
SmelterTailing Index.doc; Lampbright Index.doc; Ecological Index.doc

Hello all,

The Chino AOC repository indexes are attached for the quarterly update. I believe they are now all up to date, but please let me know if something is missing.

Attached are also the separate Chino AOC repository indexes that I've been compiling for the Chino UAA Hydrology Protocol (HP) and Chino Site-Specific Copper Criteria (SCC). As we've discussed previously, these have been treated somewhat differently in the Chino AOC physical repositories since they are simply amassed into one numerical folder for each initiative (STSIU 137-Chino UAA HP and STSIU 139-Chino SCC) instead of separate numerical assignments for each chronological piece of correspondence. An alphabetical character is used instead to establish a unique identifier and to assign the chronology. This separate system was initially established by Phil Harrigan so I've just been following along. For these particular folders, the repositories contain the correspondence letters listed in the indexes and the most recent versions both the Chino UAA HP (this might be revised later and will be replaced in that event) and SCC reports as CDs. In the file cabinets, I have also added tabs to highlight where the Chino UAA and SCC folders are located within the STSIU files for easier locating. This would complement the public outreach efforts conducted by Chino in advance of the WQCC meetings on both initiatives.

Regards, Matt
